Introduction

1.1

Modular fixturing for your vision system

Renishaw vision fixtures are designed for use with vision systems or multi-sensor machines, creating a fast and repeatable way to fixture your part for consistent and accurate inspection.

Each vision fixture is made with a precision acrylic base plate that allows for backlighting and a clear, clean view of the part. Fixturing components can quickly be threaded into the base plate and arranged in any configuration, allowing the part to be held in a virtually free state with very little force applied to the surface. The part can be viewed easily without obstruction to the backlight or probe path. Fixturing components can be placed within a tight circumference to hold and locate the smallest of parts.

Renishaw offers two fixturing options to fit your specific vision machine:

- **Quick load corner (QLC)**
designed to fit your specific vision machine
- **Interchangeable vision fixture (IVF)**
for vision systems 450 mm × 450 mm or larger,
customised for your machine and application

2.1

Quick load corner (QLC)

Renishaw's quick load corner (QLC) system is designed to fit your specific vision machine.

QLC with multi-window plate

QLC with multi-hole plate

This system is made to fit the lower left hand corner of your vision stage and the location of its mounting holes.

The quick load corner contains magnets that enable Renishaw's vision acrylic base plates to snap into a precise and repeatable position, enabling quick and easy loading and unloading of plates.

Steel pins are pressed into the sides of the plate to fit the magnets contained in the QLC.

The edges of the QLC are serrated so that parts can be mounted directly against them and fixed with Renishaw M4 or M6 fixturing components. This enables quick and easy viewing and inspection.

There are two plate options to choose from:

- **Multi-hole**
Set up and check as many parts as possible at one time with a clear area in the centre of the plate with no holes.
- **Multi-window**
More windows for the clearest view of small parts.

Additional sub plates may be purchased for fixturing more parts.

Mounting holes are provided for most major brands of vision systems. To ensure you receive the correct size and proper fit, include your machine make and model number when ordering.

QLC vision fixturing kits

3.1

Choosing your fixturing kit

Renishaw vision fixtures are sold in preconfigured kits to make it easy to get started. A kit consists of one acrylic base plate, a quick load corner (QLC) and a comprehensive set of components.

The kit to choose will depend on the type of parts you are going to fixture.

Renishaw offers two kit choices:

- **Multi-hole:** more holes for attaching more components
- **Multi-window:** more windows for optimal viewing of small parts

Kits are available in M4 or M6.

The QLC frame is fitted to your specific vision system. Contact your local sales office stating your machine make and model number to determine which frame you require.

Individual components may also be purchased to expand your fixturing kit.

How to choose your kit

- 1 Choose a thread size: M4 or M6
- 2 Contact your local sales office to select the correct QLC frame
- 3 Choose a plate type: multi-hole or multi-window
- 4 Choose a set of components

QLC M4 vision kits

4.1

The QLC M4 vision kit is ideal for parts that fit within a 75 mm x 75 mm working volume.

A kit includes an acrylic base plate with M4 threaded holes 10 mm on centre, a quick load corner and one set of components (A or B).

QLC M6 vision kits

5.1

The QLC M6 vision kit is a comprehensive kit for holding plastic, aluminium, rubber and other non-ferrous parts.

A kit includes an acrylic base plate with M6 threaded holes 12.5 mm on centre, a quick load corner and one set of components (A).

Interchangeable vision fixture

7.1

Interchangeable vision fixture

Renishaw's interchangeable vision fixture (IVF) is ideal for machines 450 mm × 450 mm or larger.

This fixture consists of a frame and multiple subplates that can be designed to use all, half, or a quarter of the frame's total size.

The frame is made from anodised aluminium and designed to fit your specific vision machine. The frame also allows for the mounting of your probe rack and calibration artefacts.

The interchangeable subplates can be modular with M4 or M6 threaded holes (10 mm or 12.5 mm on centre) or custom. To ensure you receive the correct size and proper fit, include your machine make and model number when ordering.

A combination of both custom and modular subplates and components can be added and made to fit the same frame, allowing for maximum flexibility.

Custom fixtures

16.1

Custom fixtures for your system

If Renishaw's standard range of modular fixturing does not meet your requirements, we can provide you with custom fixtures for your vision system.

Renishaw's engineers will develop and design a custom fixture best suited to your application. All aspects of the specific job are taken into consideration, including:

- how frequently the part will be measured
- the type of material, size and shape of the part
- the dimensions and tolerances of the part
- the datums or orientation of the part
- the weight and size of the fixture.

To enable us to provide the best solution, you can submit your pictures, parts, prints or CAD files for review. For more information, please contact your local sales office.
